

Governance, Risk, & Compliance (GRC) Solutions

MAD Security GRC Solutions

In today's digital landscape, navigating the demands of the evolving regulatory environment and the rising cost of compliance can be challenging. Beyond these challenges, companies are facing an unpredictable cyber threat landscape. Enterprises need efficient and real-time risk management solutions that are cost-effective and scalable. MAD Security's Governance, Risk, and Compliance (GRC) solutions are tailor-made for your enterprise so you can quickly identify risks automatically, maintain compliance, as well as prepare for the next generation of GRC innovation.

Understanding the Challenges

Organizations are facing an ever changing and escalating risk landscape. It is imperative for executives and senior management to identify and understand the risks facing their organizations. Your organization needs a team that can act as a trusted advisor and strategist to provide actionable roadmaps that not only improve your security posture and help mitigate risks, but also help develop and govern your Information Security program.

Governance, Risk, and Compliance (GRC) touches every part of an organization. In doing so, it serves to provide a firm foundation for sound risk intelligence as well as a way forward in complying with new regulations and security controls. Depending on the current state of your organization, an effective approach to GRC can be challenging.

GRC Solutions

Organizations today are either required to have a security framework or will be required to have one soon. MAD Security takes a lifecycle approach to Security Architecture frameworks.

- Gap Assessments
- Risk Assessments
- Risk Management
- C-Suite & Virtual CISO Consulting
- Business Continuity & Disaster Recovery
- Policy Development & Review
- Information Security Governance Framework Design

MAD Security will help you not only understand what your security posture is, but will also work with you to come up with plans for improving it.

Benefits of Working With MAD Security

- Time savings and a lack of complexity of working through various frameworks
- Clarification in navigating through compliance requirements
- Guidance on how to mitigate deficiencies
- Tailored written processes, procedures, and policies aligned to industry standards
- A newly defined, secure environment that is both scalable and easily managed
- Reduction in operational and human resource costs
- Newfound monitoring capabilities throughout an environment
- Analysis on missing technologies within an environment to achieve optimal efficiency

Our GRC Consultants are poised with the highest level of Information Security and Governance certifications and experience in multiple industries including Education, Financial Services, Department of Defense, and more. Not all organizations are the same, therefore, each project is customized to address your unique situation.

Examples of Frameworks We Support

- NIST SP 800-171
- CIS 20
- NAIC
- GDPR
- HIPAA
- FFIEC
- SSAE-18/SOC-2
- NIST 800-53
